

PIYUSH KUMAWAT

Vadodara, Gujarat, India

+91 9001296699 Email LinkedIn GitHub

Summary

Final-year Computer Science & Engineering student at Parul University with a passion for ethical hacking and offensive security. I build full-stack applications from the ground up — then leverage that knowledge to understand how real systems can be attacked. Strong foundation in Linux, networking, and web application security concepts, with active hands-on learning through TryHackMe. Eager to experiment, grow, and contribute to real red team engagements.

Experience

Freelance Web Developer

May 2026 – Jun 2026

Seacoin Research & Laboratories Pvt. Ltd.

Vadodara, India

- Sole developer for a full production B2B deployment — built deep understanding of how real applications are constructed, configured, and where they become vulnerable
- Implemented JWT authentication and SameSite cookie security architecture — security-conscious development from the ground up
- Configured Cloudflare proxy, DNS, and CDN — hands-on exposure to network-layer infrastructure and traffic security controls
- Debugged cross-origin and cookie policy issues in production — developed practical understanding of web security boundaries and browser enforcement

Projects

Password Analyzer | Python, HaveIBeenPwned API, RockYou Wordlist

2025

- Built to understand real-world credential attack vectors — entropy scoring, breach lookup across 800M+ compromised records, and RockYou wordlist matching against 14M+ passwords
- Implements mutation detection and repeating character analysis — models how attackers think about password guessing, not just how defenders rate strength
- Designed with an attacker-first mindset: identifies specific weaknesses rather than returning a generic strength label

Port Scanner | Python

2025

- Built from scratch to understand how recon tooling works internally — identifies open ports and service names across a defined range for a given target IP
- Supports both CLI and web UI modes; serves as the foundation for a broader offensive recon toolkit in active development

Technical Skills

Security: Ethical Hacking, Web Application Security, OWASP Top 10, Network Recon, Active Directory (Concepts), Linux Fundamentals

Languages: Python, Bash, JavaScript, SQL

Tools & Platforms: Kali Linux, Linux, Git, Cloudflare, Burp Suite (learning)

Learning: Actively building hands-on offensive security skills through TryHackMe labs and HTB CPTS learning path

Activities & Learning

TryHackMe

Ongoing

Offensive Security Labs

Online

- Practicing penetration testing methodology, Linux privilege escalation, and web application attack techniques
- Building open source offensive security tooling in Python — publicly releasing tools on GitHub to contribute to the security community

Deloitte Australia Cybersecurity Simulation

2025

Virtual Job Simulation — Forge

Online

- Analyzed web server logs to identify and distinguish malicious traffic from normal activity
- Developed a defensive perspective on attack patterns — understanding what defenders see complements offensive research

Certifications

Computer Networks and Internet Protocol — NPTEL, IIT Kharagpur

Completed

Education

Parul University

2023 – 2027

Bachelor of Technology — Computer Science & Engineering

Vadodara, India
