SUMMARY

Final-year Computer Science & Engineering student focused on offensive security, with hands-on experience in network reconnaissance, credential attacks, and Active Directory concepts. Builds full-stack systems to understand real-world architecture, then applies that knowledge to identify how they can be compromised. Seeking a Red Team Intern role to apply structured attack methodology in a live engagement environment.

EXPERIENCE

Freelance Web Developer

May 2026 – Jun 2026

Seacoin Research & Laboratories Pvt. Ltd.

Vadodara, India

- Architected and deployed a full-stack B2B backend from scratch for a registered agrochemical company using Node.js + Express
- Implemented JWT token-based authentication with secure refresh token rotation and SameSite (Strict) cookie architecture to prevent CSRF and XSS token theft
- Configured MongoDB Atlas with role-based access control; deployed on Render with environment variable isolation and secrets management
- Set up Cloudflare proxy layer for DDoS mitigation, WAF rule configuration, and DNS security hardening; configured custom domain and SSL/TLS certificate pinning
- Sole developer — owned all architectural decisions, security controls, and deployment infrastructure end-to-end

PROJECTS

Hashtrace | *Python, HaveIBeenPwned API, RockYou Wordlist*

2026

- CLI tool for deep password strength analysis using mathematical entropy scoring, HaveIBeenPwned API breach lookup against 800M+ compromised credentials, RockYou wordlist matching across 14M+ passwords, and mutation detection

Port Scanner | *Python*

2026

- Scans a target IP across a defined port range, identifying open ports and associated service names. Supports both CLI and web UI modes

TECHNICAL SKILLS

Offensive Tools: Nmap, Wireshark, Tcpdump, Hydra, Netcat, hashcat, John the Ripper

Security: Active Directory, Network Recon, Vulnerability Assessment, Port Scanning, Service Enumeration, Packet Capturing, Traffic Analysis, Brute Force Attacks, Credential Attacks, Password Cracking, Hash Analysis, OWASP Top 10

Languages: Python, Bash, JavaScript, SQL

Platforms: Kali Linux, Git, GitHub

ACTIVITIES & LEARNING

HTB CPTS (In Progress): Hack The Box Certified Penetration Testing Specialist — structured methodology training in network reconnaissance, vulnerability assessment, privilege escalation, and lateral movement across Windows/Linux environments

TryHackMe: Top 7%, 50+ day streak, 70+ rooms completed

HackTheBox: Active learner

Burp Suite: Studying for web application penetration testing

Forage: Deloitte Australia Cybersecurity Virtual Job Simulation — web server log analysis and threat identification

CERTIFICATIONS

Computer Networks and Internet Protocol — NPTEL, IIT Kharagpur

EDUCATION

Parul University

Bachelor of Technology — Computer Science & Engineering

Vadodara, India

2023 – 2027
